Students are granted access to this material solely for their personal use and may not use it for any other purpose without the express written consent of the instructor.

For each question, write a program with comments to perform the required tasks.

Question 1.

- Initialize 3 variables **a**, **b** and **c** with values 8.35, 7 and 10.85 respectively.
- Print the values of **a**, **b** and **c**.
- Evaluate the arithmetic expression $\frac{a^2+b}{\sqrt{c}(a-b)}$ using the values **a**, **b** and **c** defined above, assign the result to a variable and
- print the result with a *suitable message*¹.

Question 2.

Sarah completed the following amounts of work (in hours) each day:

Day	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
Hours	8	9.5	6	4.5	5.8	6.25	2.5

- What is the total number of hours worked by Sarah that week? Display this value (rounded to the nearest integer) with a *suitable message*¹.
- What is the average number of hours worked on weekend days? Display this value (rounded to 2 decimal places) with a *suitable message*¹.
- What is the average number of hours worked on weekdays? Display this value with a *suitable message*¹.
- If Sarah received **\$22 per hour** for the work, what was her total earnings for the week? Display this value with a *suitable message*¹.

Question 3.

The volume of a cone with height **h** and base radius **r** is given by the formula:

$$volume = \frac{1}{3}\pi r^2 h$$

The total volume of a cone is **565 cm³**. It has a circular base of radius **5 cm**. Calculate the height of the cone and print it with a *suitable message*¹. You can assume $\pi=3.14$.

Submission:

1. You will earn a maximum of 100 points (accounts for 7%) for submitting your **source code** (`lastname_sol_A1.py`) within the specified deadline.
2. **Do not upload your source code to Brightspace as a single zip/rar file.** Such submissions will not be accepted and a mark of **zero** will be assigned.
3. Marks will be **deducted** if **comments and/or a suitable message**¹ are missing.
4. **Late submissions** will incur a penalty of 10% per day for **up to two days**. Submissions made beyond two days will not be accepted, and a mark of **zero** will be assigned.
5. **Unlimited resubmissions** are allowed. However, only the last submission will be considered. Note that if you resubmit after the deadline, a penalty will apply, even if an earlier version was submitted on time.

¹**NOTE:** In this course, the phrase ‘*suitable message*’ refers to some kind of description that describes what is being printed. For example, just printing the value **22** by itself does not tell the user anything useful; however, printing ‘**x = 22**’ would add some context to what is being printed and so this would qualify as a ‘*suitable message*’ if the value of x is to be printed.

Academic Integrity.

Plagiarism is a serious offense and can result in severe consequences such as receiving a grade of **zero** on the assignment/lab or even being asked to leave the program.

Copying or using someone else’s code is considered plagiarism. This includes using code from online sources, previous labs/assignments, or from other students. Even if you have modified the code, our antiplagiarism software can still show it as plagiarism.

To avoid plagiarism, make sure to always use your own words and ideas when writing source code. Additionally, always check with your instructor to make sure you understand what is allowed and what is not in terms of using outside resources.

Remember that academic integrity is essential for your own personal and professional growth, and it is your responsibility to uphold these principles. So please take it seriously and always produce your own original work.
